## Apply Volume Formulas

**Essential Question** How can you use a formula to find the volume of a rectangular prism?

**CONNECT** Both prisms show the same dimensions and have the same volume.

Measurement and Data—5.MD.5a, 5.MD.5b

**MATHEMATICAL PRACTICES**  
MP.1, MP.6

## Unlock the Problem

Mike is making a box to hold his favorite DVDs. The length of the box is 7 inches, the width is 5 inches and the height is 3 inches. What is the volume of the box Mike is making?

- Underline what you are asked to find.
- Circle the numbers you need to use to solve the problem.

**One Way** Use length, width, and height.

You can use a formula to find the volume of a rectangular prism.

$$\text{Volume} = \text{length} \times \text{width} \times \text{height}$$

$$V = l \times w \times h$$

**STEP 1** Identify the length, width, and height of the rectangular prism.

length = \_\_\_\_\_ in.

width = \_\_\_\_\_ in.

height = \_\_\_\_\_ in.

**Math Talk**

**Mathematical Practices**

**Explain** how you can use the Associative Property to group the part of the formula that represents area.

**STEP 2** Multiply the length by the width.

$$\underline{\hspace{2cm}} \times \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

**STEP 3** Multiply the product of the length and width by the height.

$$35 \times \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

So, the volume of Mike's DVD box is \_\_\_\_\_ cubic inches.

You have learned one formula for finding the volume of a rectangular prism. You can also use another formula.

*Volume = Base area  $\times$  height*  
 $V = B \times h$   
*B = area of the base shape,*  
*h = height of the solid figure.*

**🔑 Another Way** Use the area of the base shape and height.

Emilio's family has a sand castle kit. The kit includes molds for several solid figures that can be used to make sand castles. One of the molds is a rectangular prism like the one shown at the right. How much sand will it take to fill the mold?

$V = \quad B \quad \times h$   
 $V = (\quad \times \quad) \times \quad$   
 $V = \quad \times \quad$   
 $V = \quad \text{cu in.}$

Replace *B* with an expression for the area of the base shape. Replace *h* with the height of the solid figure.  
 Multiply.

So, it will take  $\quad$  cubic inches of sand to fill the rectangular prism mold.

**Try This!**

**A** Find the volume.

$V = l \times w \times h$   
 $V = \quad \times \quad \times \quad$   
 $V = \quad \times \quad$   
 $V = \quad \text{cu ft}$

**B** Find the unknown measurement.

$V = l \times w \times h$   
 $60 = \quad \times \quad \times \blacksquare$   
 $60 = \quad \times \blacksquare$

**Think:** If I filled this prism with centimeter cubes, each layer would have 20 cubes. How many layers of 20 cubes are equal to 60?

So, the unknown measurement is  $\quad$  cm.

Name \_\_\_\_\_

## Share and Show

Find the volume.

1.

$V =$  \_\_\_\_\_

2.

$V =$  \_\_\_\_\_

## On Your Own

Find the volume.

3.

$V =$  \_\_\_\_\_

4.

$V =$  \_\_\_\_\_

5.

$V =$  \_\_\_\_\_

6.

$V =$  \_\_\_\_\_

### MATHEMATICAL PRACTICE 2

**Use Reasoning Algebra** Find the unknown measurement.

7.

$V = 420$  cu ft     $\blacksquare =$  \_\_\_\_\_ ft

8.

$V = 900$  cu cm     $\blacksquare =$  \_\_\_\_\_ cm
